INTRODUCTION

Welcome to Loma Linda University (LLU) and the Department of Psychology! We are truly excited you have chosen our program to complete your doctoral education and look forward to helping you realize your goal of becoming a clinical psychologist. This handbook outlines and details the essential guidelines that will enable you to successfully complete the Clinical Psychology Ph.D. program, which is accredited by the American Psychological Association (APA). The table of contents directs you to important information regarding policies and procedures that govern the student's program. Material in the handbook is updated annually to ensure that information is accurately communicated to students, faculty, and staff when relevant changes and/or new information are required. The handbook is in harmony with but subservient to official LLU publications such as the Catalog (https://home.llu.edu/education/office-of-provost/catalog) and the university Student Handbook (https://home.llu.edu/sites/home.llu.edu/files/docs/student-handbook.pdf). Should differences exist or interpretations differ, the official university publications take precedence. Furthermore, the contents of this handbook are in harmony with the Ethical Principles of Psychologists and Code of Conduct (http://www.apa.org/ethics/code) of the American Psychological Association (APA).

Graduate Education

Graduate education, particularly at the doctoral level, is very different from the undergraduate education experience. Doctoral level academics represent the zenith of educational and intellectual development. It is challenging and intense, and the workload is voluminous and stretches one's thinking. A hallmark of doctoral study is critical thinking, the continuous examination of your own thoughts as well as the thoughts of others. According to Paul and Elder (2014), critical thinking is self-directed, self-disciplined, self-monitored, and self-corrective. It requires rigorous standards of excellence and mindful command of their use. It entails effective communication and problem solving abilities and a commitment to overcoming your native egocentrism and sociocentrism.

Graduate school also marks a transition in how one is expected to learn material. In a doctoral program and beyond, your learning will be largely self-directed, with guidance from your mentor, instructors, and supervisors. In the classrooms, research labs, and clinical training sites, you will be introduced to the foundational elements of the science and practice of clinical psychology. However, faculty fully expects you to use these experiences simply as a starting point. There is a shared expectation that you will go beyond classroom material and seek out literature and examples from clinical practice that will help deepen your understanding of ideas that are introduced in the classroom.

Ethics, Values, and Standards of Conduct

The program adheres to APA’s Ethical Principles of Psychologists and Code of Conduct. Consistent with the principles and standards delineated in this document, there are many values and characteristics that identify a professional psychologist, including an awareness of your attitude and your presentation of self, comprehensive knowledge of psychology, knowledge of clinical research and its applications, assessment and clinical intervention skills, sensitivity to issues of diversity, ability to form working relationships with clients, ability to form collaborative relationships with peers and
co-workers, positive responsiveness to supervision and advisement, respecting inter-professional expertise, emotional stability, appearance/dress that is appropriate for the setting, reliability and ethical responsibility, timeliness in completing assigned tasks, keeping scheduled appointments, and making appropriate arrangements if appointments have to be re-arranged. This list is certainly not exhaustive, but does illustrate the standards of conduct and professionalism expected of doctoral students. We expect all of us to keep in mind the “golden rule;” treat others as you would want to be treated.

One of the environments in which professionalism is developed is in the classroom, a setting where learning and spending time with others provides mutual benefits. Therefore, your professionalism develops and gets refined when you complete the assigned readings and assignments before coming to class. In that way, you will gain more from class discussions. Come to lectures on time, prepared to learn, and ready to contribute to the course in a thoughtful manner. Avoid engaging in behaviors that are distracting during class: doing assignments for other classes, sleeping, texting, taking phone calls, playing computer games, browsing the internet, and socializing. When you do these things, it is likely that you are not learning. In addition, you are most likely disrupting the learning of others around you. Most of all, it is a demonstration of disrespect for the instructor and/or supervisor.

Another environment in which professionalism is developed is in clinical practicum experiences. Several principles and guidelines apply to all supervised clinical experience. While participating in supervised clinical experience, students are expected to comport themselves in compliance with the APA’s Ethical Principles of Psychologists and Code of Conduct.

Remember, you want to develop those characteristics that positively set you apart as a professional. These same characteristics are those that are looked for and desired by internship and postdoctoral training sites, as well as employers. Excellent academic and clinical qualifications are desired; however, if the professional characteristics are not present, these qualifications will not carry as much weight.

**Diversity and Non-discrimination Statement**

As part of Loma Linda University, the Department of Psychology is committed to promoting diversity and fostering inclusion in all aspects of its activities and initiatives. Loma Linda University was established by the Seventh-day Adventist church, and the university affirms that Christian principles are incompatible with various forms of discrimination that have divided societies, and that all persons are of equal worth in the sight of God and should be so regarded by all His people. Consistent with university policy, the Department of Psychology is committed to equal education and employment opportunities for all, and does not unlawfully discriminate on the basis of race, color, ethnicity, national origin, socioeconomic status, gender identity, sexual orientation, disability, or veteran status in its policies.

As a Department, in line with Principle E of APA’s Ethical Principles of Psychologists and Code of Conduct and APA’s multicultural guidelines, we believe that as psychologists we must recognize and understand the diversity of the world, the communities we serve, and how our own cultural background (whether associated with ethnicity, race, socioeconomic status, religion, gender, sexual orientation, or any other source of cultural diversity) influences our own psychological processes, dispositions, and behavior, ultimately impacting the service we provide and how we interact with
patients and communities. Consistent with this view, the Loma Linda University Department of Psychology strives not only for diversity in student admissions and faculty recruitment, but also in the curriculum and training we provide. Hence, we expect our students to be culturally competent and able to learn from and contribute to the communities they serve, within the corresponding cultural and social-structural context. To this end, in addition to courses on cultural and human diversity, the pivotal role of culture and diversity in psychological functioning and behavior is integrated throughout the curriculum, including research and clinical training.

Involvement in clinical, research, and service activities with minority populations is strongly encouraged, and opportunities for such work are highly represented in practicum placements, research opportunities, and service activities both on campus and in the broader community. The catalyzing power of diversity not only enriches all of us by exposing us to a range of ways to understand and engage with the world, identify challenges, and develop solutions, but it is also necessary for building a comprehensive understanding of human behavior.

The Department of Psychology has established a Diversity Committee that develops and implements policies and programs (e.g., diversity scholarships) designed to promote diversity. Among other initiatives, this committee seeks to support the department in its continual efforts to recruit and retain diverse students and faculty. The department prides itself on maintaining a collaborative, inclusive atmosphere, and minority students are strongly encouraged to apply to our programs.

**PROGRAM PHILOSOPHY AND CURRICULUM**

**Overview and Training Model**

**Introduction.** The Psychology Department at Loma Linda University offers two distinct programs for doctoral education and training in clinical psychology: the Ph.D. degree program and the Psy.D. degree program. Students pursuing a doctoral degree in clinical psychology are admitted to one of these two programs according to their experience and career objectives. The Ph.D. clinical program, in which students complete required psychological sciences foundation coursework, clinical coursework and practica/internship, research requirements, wholeness classes, and elective requirements, is designed to be completed in 6 years.

The foundational training paradigm for the Ph.D. clinical program is that of the 1949 Boulder scientist-practitioner model (Rainy, 1950). Persons obtaining this academic degree are (1) well-grounded in the empirical methods of science, (2) capable of conducting independent research, (3) proficient in applying published research results to their clinical work, and (4) demonstrably competent as practicing clinicians.

Each student enrolled in the Ph.D. clinical psychology program in the Department of Psychology at Loma Linda University has the right to pursue an education in an environment that is conducive to and supportive of academic and personal growth and development. In this regard, the educational mission of the Department of Psychology is grounded in and promoted by the professionalism of its faculty and students in interaction with one another, with University Administration, education and support personnel, and the community at large.

**Program Progress and Duration.** It is important to self-monitor your progress online through LLU
onTrack (which contains all degree requirements and is created using the official degree requirements delineated in the Catalog). Students may also utilize a hard copy of the Degree Compliance Report (see Appendix), Recommended Course Sequence (see Appendix), and Ph.D. Time Line (see Appendix) as resources to guide them in tracking their progress and completing program requirements. It is expected that students will complete the Ph.D. program in 6 years (i.e., 5 years of course work, practicum training, and research training, including the dissertation, with the 6th year being internship, completion of final degree requirements, and graduation). The Department of Psychology and the School of Behavioral Health do not favor granting extensions except for extenuating circumstances or for persons who are designated as requiring special accommodation. Degree extensions can only be approved by the SBH Dean’s Office and supported by appropriate documentation. The university allows 7 years for doctoral degrees. Financial Aid allows for 28 quarters.

Please be vigilant about your progress through the program, as normal progression is expected. Difficulties may arise with your financial aid if you deviate from the Recommended Course Sequence (see Appendix) and/or go beyond the prescribed time. Though the department can provide appropriate support, it is ultimately the student’s responsibility to understand and take into account the impact of any deviations from the Recommended Course Sequence and/or program extensions on their financial aid.

Should an extension be requested, the following procedures must be adhered to:

1. The request must be made, in writing, to the student’s Director of Clinical Training accompanied by all supporting documents.

2. The request will be presented to full faculty for review, discussion, and final vote.

3. The faculty recommendation will be communicated to the Department Chair.

The faculty and Chair decision will be conveyed to the student. Any extension beyond 7 years must additionally be approved by the School of Behavioral Health Dean’s office.

**Academic Advisor.** Each student will be assigned an Academic Advisor during fall quarter the first year in the Psychology Graduate Program. The Psychology Department Academic Advisors are all core faculty within the Department of Psychology. The Academic Advisor will assist the student with course selection each quarter in order to ensure an appropriate academic schedule and the timely completion of requirements for the corresponding degree. The Academic Advisor is available to the advisee to assist in any other aspect of academic counseling. The DCT will be the assigned academic advisor to the student upon entering the program unless the student has already chosen a research chair. Upon identification of a research chair, the student needs to meet with the Admissions and Records Coordinator to complete a Change of Academic Advisor form, and the research chair will become the student’s academic advisor. This policy does not apply if someone other than a core faculty member (e.g., a CSUSB faculty person or other adjunct faculty person) becomes the research chair.

**Degree Requirements**

**Overview.** Students enrolled in the Ph.D. clinical program are required to take a total of 204 units.
Students complete psychological sciences foundation, quantitative/research foundation, wholeness, psychological assessment, psychological treatment, clinical practice, research, and elective courses in accordance with the University Course Catalog corresponding to their year of entry into the program. Students are required to abide by the prerequisites and co-requisites as outlined in the Catalog. While some degree requirements may be changed at the discretion of the department, the student’s entering Catalog represents the official agreement between the University and the student with regard to degree requirements.

To ensure and facilitate students’ timely movement through the program, it is imperative that the Recommended Course Sequence (see Appendix) be followed. This will keep each student on track and assist each student in arriving at the various gates of the program on time. Taking courses out of sequence may delay progress by a year or two. There may be valid reasons why courses are taken out of sequence (e.g., academic variances, transfers, etc.). However, any deviation from the printed sequence should be discussed with your advisor. These steps are intended to help avoid unnecessary delays and problems. Religion courses and elective courses can be taken outside of the department; no required courses are to be taken outside the department without an approved Petition for Academic Variance (available online at http://www.llu.edu/ssweb/registration.html).

**Psychological Sciences Foundations Coursework.** The clinical psychology Ph.D. degree program has been informed by the Boulder model (Rainy, 1950) for training in psychology, and thus emphasizes the scientist-practitioner orientation to the discipline and assumes that students are firmly grounded in the basic psychological sciences. As such, Ph.D. students are required to complete five (5) psychological sciences foundation courses, as well as PSYC 526 (Ethics and Legal Issues in Clinical Psychology), during the first two years of their graduate program (see Appendix for Degree Compliance Report or refer to your Degree Compliance Report through LLU onTrack).

In addition, students are required to attend Colloquium (Psyc 591) for their first three years in the program. As part of Colloquium, we invite distinguished speakers in various areas of scientific and professional psychology to our campus to present a one-hour colloquium. Students may miss up to three colloquia per year, and attendance is recorded. Students must be present within 15 minutes of the start of the presentation. Exceptions to the attendance policy must be pre-approved by the course instructor.

**Quantitative/Research Foundations Coursework.** In accordance with the Boulder model, all Ph.D. students are expected to acquire the skills necessary to make original research contributions to the body of knowledge within the science of psychology. In support of this goal, the curriculum for the Ph.D. has been organized to emphasize the rigorous training in scientific foundations of psychology and encourage research prior to the initiation of clinical training.

Although students are encouraged to be involved in independent research either individually or as part of research teams within and outside the department, the curriculum includes a great deal of structure toward formal involvement in psychological research. The following section provides an overview of the primary research-related coursework within the Department. For more information, consult the relevant sections of the University Catalog.
All students enrolled in the Ph.D. clinical program in psychology are expected to complete a sequence of didactic quantitative/research courses as follows: PSYC 501 (Advanced Statistics I), PSYC 502 (Advanced Statistics II), PSYC 503 (Advanced Multivariate Statistics), PSYC 505 (Research Methods in Psychological Science), and PSYC 511 (Psychometric Foundations). Additionally, students are able to take PSYC 604 (Advanced Topics in Multivariate Analysis) as an elective course. These courses as outlined above provide a thorough introduction to statistical theory and application as practiced in the discipline of psychology; in addition, they afford an advanced overview of scientific epistemology and proper dissemination of research findings, including experimental design, methodology, and reliability and validity of measurement. The two primary objectives for these foundational courses are to (a) provide students with a sufficient background to critically and competently evaluate the literature in scientific psychology for application to and supplementation of the clinical practice of psychology, and (b) to equip students with the basic tools with which to begin an apprenticeship under the mentoring of a research supervisor, leading to a dissertation.

**Doctoral Dissertation.** In addition to didactic courses in quantitative/research foundations, all students enrolled in the clinical Ph.D. program are expected to be continually enrolled in research units (PSYC 597, Supervised Research: Lab Affiliation and PSYC 697, Doctoral Research) commencing with winter quarter of their first year, with the exception of the internship year. These units will receive a grade of satisfactory/unsatisfactory at the end of each quarter, reflecting the student’s research experience and progress. Students registering for PSYC 597 must submit a completed Title Request Form (available online) at the time of registration.

Students enrolled in the clinical Ph.D. degree program must complete a **minimum of 43 units of PSYC 697, Doctoral Research.** Students are expected to be enrolled in research continuously in accordance with the Recommended Course Sequence. The 43 units of PSYC 697 involves the proposal, implementation, completion, and dissemination of an original dissertation study. Normally this research entails the empirical test of a hypothesis informed by a summary of the relevant research literature. While an experiment or quasi-experiment would typically be preferred, other methodologies will be considered (e.g., survey, qualitative, mixed methods) depending on the nature and importance of the phenomena under investigation. It is important that you work with your advisor to ensure that the dissertation has the depth and breadth to make an original contribution to the scientific literature. Students must complete all PSYC 697 units and successfully complete their dissertation for conferral of the doctoral degree. A summary of the procedural steps within the research curriculum can be found in the Appendices.

Students in the Ph.D. program in clinical psychology should ideally begin to identify a research chair in the first quarter of the program, and begin to explore their dissertation topic in winter quarter of their first year. The dissertation proposal must be defended no later than June 30th of the second year. Students will not be permitted to begin internal practicum unless they have successfully proposed their dissertation. If a student does not pass the original proposal, the student may propose once more. If they do not pass the second proposal it is grounds for dismissal. The final dissertation defense must be completed no later than October 15th of the fifth year. Students will not be permitted to apply for internship unless the final defense is successfully completed. Again, students will have two attempts to successfully defend their dissertation. If the student does not pass the second defense, it is grounds for dismissal. Students should complete any requested edits, print, and
bind their dissertation prior to leaving for internship, as this is a requirement for graduation. Additionally, students must have submitted a first-authored manuscript for publication by June 30th of their fifth year, which is also a requirement for graduation. Ideally this manuscript should come from the dissertation; however, that is not required.

Each student must choose a dissertation committee to guide and approve the Ph.D. doctoral dissertation research. This faculty dissertation committee must consist of at least four members, one of whom must be a clinical psychologist and all of whom must have doctoral degrees in psychology or a related discipline. At least two of the members must be from the regular Departmental faculty, one of whom will serve as Chair of the committee. At least one of the members must come from outside of the Department. If students choose a dissertation committee chair that is outside the department, they must consult with their DCT for procedural guidance. Students should consult with the Admissions and Records Coordinator to complete Departmental Form E, Formation/Change of Supervisory Committee prior to the commencement of formal work on the dissertation. The student must present a formal defense of the dissertation proposal before the supervisory committee. The student must then meet with the Admissions and Records coordinator who will file Departmental Form F, Defense of Research Proposal, at this time.

The successful completion of the defense of the dissertation proposal constitutes one requirement for advancement to doctoral candidacy. Other requirements include completion of the core curricula, successful completion of the comprehensive exam, and other requirements as specified in the SBH Catalogue. Students should consult with the Admissions and Records Coordinator to complete FGS Form A and the Graduation Petition prior to graduation.

Following successful defense of the dissertation, students must complete edits recommended by the committee, obtain final approval by the chair and all committee members, and format and submit the final dissertation for binding in accordance with FGS policy. Students will work with FGS representatives to ensure proper formatting of the dissertation prior to binding.

Institutional Approval for Research. Many historical documents, including The Belmont Report (The National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research, 1979), set forth the ethical principles and guidelines that individuals should adhere to when conducting research. Without exception, any research project involving human research participants conducted by a student or faculty member under the auspices of the Department of Psychology, Loma Linda University, must have documented approval from the Institutional Review Board (IRB) before data collection begins. Similarly, without exception, any research project using nonhuman animals conducted by a student or faculty member under the auspices of the Department of Psychology, Loma Linda University, must have documented approval from the Institutional Animal Care and Use Committee (IACUC) before animals are ordered and data collection begins. Information on human and animal research at LLU including the IRB application forms may be found online at https://researchaffairs.llu.edu.

Wholeness Curriculum Coursework. Students enrolled in the Ph.D. clinical program will also complete 19 units within the Wholeness Curriculum. Students should refer to their current Ph.D. Degree Compliance Report. The FGS requires that each student in the Ph.D. clinical program complete three courses in the wholeness curriculum for which the student registers with the REL
course prefix. One of the courses must be an **RELE course**, one must be an **RELT course**, and one must be **Spirituality and Clinical Psychology** (REL R 535). In addition to the religion courses, the Wholeness Curriculum is composed of: Health Psychology, Human Diversity, and Ethics and Legal Issues in Psychology.

**Clinical Coursework.** In accordance with program philosophy, the scientist-practitioner model, and accreditation standards, clinical training is designed to be stepwise and graduated in complexity. The underlying philosophy of the clinical training program is that individuals are, first of all, psychologists who are well-grounded in the theory and science of psychology, who then go on to become and function as clinical psychologists in academic, research, or clinical settings. Woven throughout the goals and objectives of this training program is the motto of Loma Linda University, “To Make Man Whole,” thus taking into account the physical, mental, social, and spiritual aspects of human wholeness. Students in the Ph.D. clinical program will receive grounding in the primary theories of personality and psychopathology, in various assessment procedures, and in the major schools of therapeutic intervention via coursework and applied experiences as described in the Degree Compliance Report (see Appendix).

**Psychological Assessment Courses.** The goal of this multi-course clinical training sequence is for students to (a) learn the fundamentals of diagnostic interviewing and observation, (b) understand the empirical reliability and validity of a broad range of psychodiagnostic instruments, and (c) develop skills in the administration, scoring, and interpretation of these instruments and in the writing of reports summarizing the assessment results. These skills will be acquired within an Evidence Based Psychological Practice framework. Refer to the Degree Compliance Report (see Appendix) for a list of courses.

**Psychological Treatment Courses.** Along with the assessment courses and their concurrent practice labs in the second and third years of the program, students will also begin the multi-course psychological treatment sequence, which also commences at the end of the second year and extends throughout the third year in the program. The goal of this sequence is to assist students in learning the theory, practice, and research associated with a range of Evidence Based Psychological Practices. Refer to the Degree Compliance Report (see Appendix) for a list of courses.

**Practicum/Internship Experience.** Students in the Ph.D. Clinical Psychology program are required to complete three years of practicum: Internal Practicum (Psyc 781), External Practicum (Psyc 782), and Pre-Internship (Psyc 798), with each, respectively, typically beginning in summer quarter of years 3, 4, and 5 of the program (see Degree Compliance Report and Recommended Course Sequence). Students must also complete their Internship (PSYC 799) during their final year in the program. Didactic coursework (e.g., Psychopathology, Practicum Preparation, Ethics & Legal Issues in Psychology, Psychological Treatment, and Psychological Assessment Courses) and other requirements (e.g., dissertational proposal defense) must be completed in order to begin practicum training, and additional requirements (e.g., final defense of dissertation, internship eligibility criteria) must also be met in order to apply for Internship. Students engaged in practicum and internship training must be registered for clinical units at all times, and this will entitle them to the professional liability insurance coverage provided by Loma Linda University in the amount of $1,000,000 per occurrence and an annual aggregate of $3,000,000. The training facility will have full responsibility for the patients or clients who are involved with the students. Students may have
one primary and one supplemental practicum site. If they want more than this, they must ask their DCT to submit their request to full faculty. The DCT will convey the faculty’s decision to the student. This applies to internal practicum, external practicum, pre-internship, and directed clinical experience.

The student’s primary clinical supervisor will submit an online evaluation of the student semi-annually, which will be forwarded to the student and their director of clinical training. The DCT and the student’s clinical supervisor will discuss any problems that arise. If any significant problems develop in the practicum experience, students will be given notice (which may include a referral to Student Affairs Committee), along with the opportunity to discuss and remedy them.

The training facility has the option of recommending to the program the withdrawal of a student if, after attempts at remediation have failed, their performance or behavior does not meet the standards of the clinical training site or the program. The training facility director makes such a recommendation to the DCT who will then discuss the recommendation with appropriate Department faculty. The removal of a student from any practicum or internship placement may be grounds for dismissal from the program.

Students will be given regular opportunities to evaluate their own training experience and the supervision which they have received. These evaluations (or at least a summary thereof) may be shared by the Director of Clinical Training with the facility’s Training Director. At their discretion, the program may share the results of these evaluations, in aggregate form. Students are also required to keep accurate records of their clinical training experiences for internship applications and for state licensure. Therefore, students are strongly advised to continually track their supervised clinical experiences using software (e.g., Time2Track). Please see the APPIC website for more information on how hours are counted toward internship.

Unlicensed students may only provide professional services under the supervision of a qualified mental health professional at internal practicum, external practicum, pre-internship, or internship sites approved by the Director of Clinical Training. Students must not engage in the provision of any professional psychological services on or off campus without the prior approval from the program. Students are not permitted to assess or treat clients privately without supervision. Failure to comply with this standard may jeopardize the student’s standing in the program.

Internal Practicum. The year-long Internal Practicum (PSYC 781) is required for students enrolled in the Ph.D. clinical program. This clinical experience typically takes place in the third year, beginning in the Summer quarter. Students may not begin internal practicum until they have successfully passed Practicum Preparation, Psychopathology, Ethical and Legal Issues in Clinical Psychology, all assessment courses that are offered prior to the start date of internal practicum, and have successfully passed their dissertation proposal defense. In the case of students entering the program with advanced standing, students may begin their clinical training earlier. Exceptions to these requirements are considered on an individual basis and made at the discretion of the faculty. The Internal Practicum experience occurs within department-sanctioned training clinics and requires a commitment of 10-12 hrs/wk. Students may choose to supplement their internal practicum experience with additional hours at another site; however, this requires explicit permission from the DCT and faculty. The Internal Practicum site may not conform to the
university’s academic calendar with regard to vacations and holidays. Students must comply with the clinical training manual of the practicum site of their placement.

Supervisors conducting direct observation must be appropriately trained, credentialed, and prepared in their discipline and in the health service psychology activities being supervised, legally authorized for independent practice in their jurisdiction, and legally responsible for the direct service being provided. A minimum of one hour per week of formal, scheduled supervision is required (i.e., one hour of supervision for each 10-hour block of Internal Practicum time, or for any portion of such a 10-hour block). Primary supervisors are legally responsible for patient care, but may delegate supervision to another qualified mental health professional as needed. The DCT assigns the grade for internal practicum (Satisfactory/Unsatisfactory), which is informed by supervisor feedback.

Students enrolled in Internal Practicum will also have their first opportunity to participate in the department’s annual Practicum Fair in preparation for applying for External Practicum for the following training year. The Practicum Fair is typically held in December and allows students to familiarize themselves with the range of practicum possibilities in preparation for applying for a practicum placement for the following year. Information about sites that do not attend the fair can be found on the Ph.D. canvas site. The specific application procedures will be provided by the individual external practicum settings at the fair or on canvas. Following the practicum fair, students must submit a list of primary and supplemental practicum sites to which they wish to apply; they may not apply to any sites until they have been approved by their DCT. Applications will typically include a curriculum vitae, a cover letter that includes a statement of interest, and letters of recommendation. Sites may require additional application materials at their discretion. Students should be aware that practicum sites have a wide range of application and notification deadlines that typically run from December through April. Once a student has been offered a practicum placement for the following training year and has accepted, the commitment is considered to be absolutely binding and must be honored by both the facility and the student. Students must immediately notify all other sites to which they have applied that they have accepted another offer, and that they wish to withdraw their application from consideration. They must also notify both their DCT and the main office of their accepted offer.

**External Practicum.** The goal of the external practicum is to build upon the internal practicum experience in that the experience will be more intensive, extensive, and complex. Prerequisites that must be completed prior to beginning external practicum include having completed and passed all four quarters of internal practicum, the psychological treatment sequence, and all prerequisites for internal practicum. Failure to meet any of these prerequisites will require faculty deliberation regarding eligibility for external practicum. All students must also be in good academic and professional standing in the program, as formally verified by the DCT, before entering the external practicum experience.

The practicum is usually intended for the fourth year of the Ph.D. clinical psychology program at Loma Linda University. It is scheduled to extend for one full calendar year (12 consecutive months or four calendar quarters). The external practicum is not on the university’s academic calendar with regard to such things as vacations and holidays, but instead these matters are governed by the institutional policy of the external practicum site.
All practicum training must be in an institutional or agency setting which is approved by the program’s Director of Clinical Training. A formal written contract will exist between Loma Linda University and each practicum setting, detailing the elements of the training arrangement. With the approval of the DCT and in consultation with the student’s academic advisor, students may elect to complete supplemental hours in an additional setting. However, in order to be granted approval to do this, students must be in good academic standing and meeting expected timelines in all other responsibilities.

The total time to be committed to and actually spent in each training facility is to be an average of 16-20 hours per week for an average of 50 weeks. Supplemental sites are defined as those that require less than 16 hours per week. Students must spend a minimum of 25%, and ideally at least 50%, in direct face-to-face contact with clients at their practicum site. Activities other than direct patient contact, such as report writing, case management, record keeping, collateral contacts, supervision time, case conferences, consultations, and research are not counted toward direct face-to-face hours but are counted as support hours. Please see the APPIC website for more information on how hours are counted toward internship.

Supervisors conducting direct observation must be appropriately trained, credentialed, and prepared in their discipline and in the health service psychology activities being supervised, legally authorized for independent practice in their jurisdiction, and legally responsible for the direct service being provided. An absolute minimum of two hours per week of formal, scheduled supervision is required, (i.e., one hour of supervision for each ten-hour block of practicum time, or for any portion of such a ten-hour block). One hour of this must be in direct, individual, face-to-face supervision with the primary supervisor. The second hour may be in either individual or group supervision. The primary supervisor must be available to the supervisee 100% of the time the supervisee is accruing Supervised Clinical Experience. This availability may be in person, by telephone, by pager or other appropriate technology. If the primary supervisor is not on site, he/she must still be accessible for consultation, or ensure that another qualified supervisor is constantly available. If the primary supervisor assigned to working with the student cannot serve in that capacity for any reason, another qualified supervisor must be made available to supervise at all times. The primary supervisor may delegate a portion of the supervision for which he or she is responsible to another individual otherwise qualified to act as a supervisor (such as a postdoctoral fellow or another licensed or registered mental health professional, school psychologist, or psychiatric nurse). Students should feel free to discuss individually any matters of concern regarding their training experience with the Ph.D. Director of Clinical Training and the facility’s Training Director at any point throughout the external practicum year.

It is also important to note that students in External Practicum will, again, have the opportunity to participate in the department’s annual Practicum Fair (as previously described) in preparation for applying for Pre-Internship.

Pre-Internship. Pre-internship represents the final year of clinical training prior to internship. The application and selection process, as well as the supervision and patient contact requirements, are identical to that of the external practicum experience. During the pre-internship year, students must communicate their internship information (i.e., internship interview schedule and internship start date) with their current pre-internship training site. Even after students have matched to an
internship site, they are expected to remain fully engaged in their pre-internship practicum until released from that site.

**Directed Clinical Experience.** If a student completes additional (e.g., supplemental) clinical training beyond that which is required as part of internal practicum, external practicum, or pre-internship, or if the student completes another year of clinical training after their pre-internship year prior to leaving on internship, they must register for PSYC 795 (Directed Clinical Experience) at least 1 unit per quarter.

**Internship.** The final year of clinical training in the Loma Linda University program is the pre-doctoral internship. This experience typically occurs in the sixth year for Ph.D. clinical students. The internship is full-time for one complete year (12 consecutive months).

The Department of Psychology requires that the internship be 1 year, with a minimum of at least 1,500 total hours for the year. Students must successfully complete internship in order to meet graduation requirements. Students are strongly advised to be cognizant of the pre-doctoral hour requirements for licensure in the state(s) in which they planned to be licensed, as licensure requirements may vary widely across states.

Before the student can apply for internship, they must meet all departmental internship requirements (see Internship Eligibility Requirements in Appendix) and receive formal approval from their DCT. Before going on internship all academic coursework must be successfully completed, and one first-authored manuscript must be submitted.

While on internship, students will register for a total of forty units; however, a flat rate tuition fee equivalent to one unit will be charged per quarter while on internship. It is imperative that students follow the instructions in the Internship Registration Procedures form (see Appendix) so that all graduation requirements are met.

**Internship match process.** The goal of the internship is to provide graduate students with advanced clinical training at the pre-doctoral level. The Association of Psychology Postdoctoral and Internship Centers (APPIC) is the organization that is responsible for conducting the internship match. APPIC member internship sites use a uniform application referred to as the APPIC Application for Psychology Internship (AAPI), which is completed online by the student. This process is intended to match students with their highest ranked internship and internships with their highest ranked students. Students are charged application fees by APPIC, the amount of which depends on the number of sites to which the student applies. For more detailed information, check the APPIC Web site at http://www.appic.org/. The computerized match is conducted by the National Matching Service (NMS). Students may begin working on their AAPI on the APPIC website in the spring prior to applying. However, they may not register for the match on the NMS website until they meet all Internship Eligibility Requirements (see Appendix) and receive formal approval from their DCT. Once a student receives formal approval to apply, they must formally register with NMS by their first application deadline so that they may include their match number on their AAPI.

There are two phases of the internship match process. In phase one of the internship match process, the program requires that students only apply to APA-accredited internship sites. If a student does
not match to an APA-accredited internship site in phase one, and they must then enter phase two, they are still strongly encouraged to apply to APA-accredited internship sites, although they may also apply to sites that are members of APPIC but which are not APA-accredited. **Prior to submitting phase two rankings,** students must verify that the internship site meets APA guidelines for each APPIC site they plan on ranking, and must also receive approval from their DCT. Please see your DCT for a list of APA criteria that non-accredited internship sites must meet in order to be approved.

Students are advised *not to underestimate the amount of time required* to research their internship opportunities and to complete the entire internship application process. Students are required to attend the internship seminar, which meets monthly and starts in April and runs through November of their application year. The purpose of the internship seminar is to support students as they navigate the internship application process and to maximize their potential for success.

Students in Loma Linda University's Department of Psychology are required to abide by the results of APPIC's matching program. Loma Linda University students who renege on a Match will be subject to disciplinary actions on the part of their academic program.

**Elective Coursework Requirements.** Students are also required to complete 18 elective units. Any course offered in the department that is not used to fulfill the requirements of another area of the Ph.D. Curriculum check sheet (i.e., psychological science foundations, quantitative/research foundations, wholeness curriculum, general courses, professional concentration, psychological assessment, psychological treatment, clinical practice, research requirements) can be counted toward the elective requirement. Students may apply up to 6 directed clinical experience units (PSYC 795) toward their elective requirement.

**Professional Concentration.** Students pursuing the Ph.D. clinical degree may complete 12 of their required 18 elective units to fulfill the requirements of a professional concentration. The area of concentration should be relevant to the student’s chosen plan for research and/or practice. The Academic Affairs Committee and the Chair of the Department or his/her designee must approve all concentrations before courses are taken by the student. **The Department of Psychology has several pre-approved professional concentrations:** Primary Care Psychology, Clinical Health Psychology, Neuroscience and Neuropsychology, Clinical Child, and Social Cultural Behavioral Health. If a student wishes to pursue a professional concentration, s/he can obtain a copy of the requirements from the Admissions and Records Coordinator or from the program/department website. Students must also complete the required departmental form with the Admissions and Records Coordinator to declare a professional concentration. Students may also elect to create their own 12-unit professional concentration in consultation with their advisor. Any proposed concentration must be submitted in writing and approved by the Academic Affairs Committee.

**Courses Required for State Licensure.** Students in the Ph.D. Clinical Psychology program are also advised that several states require specific courses for licensure. They are encouraged to consult with the relevant state board of psychology regarding the requirements for the state in which they expect to work following completion of the program. Students may choose to complete specific elective courses in the program that are intended to satisfy the course requirements for licensure as a psychologist in the State of California:
Elective Course | California Licensure Requirement
---|---
Drug Addiction and Therapy (PSYC 685) | Detection and Treatment of Alcohol and Other Chemical Substance Dependency
Human Sexuality (PSYC 684) | Human Sexuality
Child, Partner, and Elder Abuse (PSYC 686) | Child Abuse Assessment and Reporting **AND** Spousal or Partner Abuse Assessment, Detection, and Intervention
Geropsychology (PSYC 676) | Aging and Long-Term Care

Given that requirements for licensure can change, students are encouraged to remain abreast of licensing requirements in the state(s) in which they intend to become licensed.

**Comprehensive Examination.** The goal of the comprehensive examination is to ensure that students enrolled in the Ph.D. program at Loma Linda University have reached a minimum level of both academic and clinical competency, and to maintain the integrity of the discipline of psychology in the department. To this end, the comprehensive examination is to allow students to demonstrate their knowledge of the scientific, methodological, theoretical, and clinical foundations of psychology as they apply to professional practice.

Though the specific format of the comprehensive examination is subject to change, the department currently utilizes the Examination for Professional Practice in Psychology (EPPP) as the comprehensive examination, as this examination is used by the field as the primary component in determining readiness to practice the profession of psychology. This examination covers the following domains:

- Biological Bases of Behavior
- Cognitive-Affective Bases of Behavior
- Social and Multicultural Bases of Behavior
- Growth and Lifespan Development
- Assessment and Diagnosis
- Treatment/Intervention
- Research Methods
- Ethical/Legal/Professional Issues

The department has an established agreement with Academic Review, one company that produces study materials for the EPPP, which allows our students to purchase EPPP materials at a discounted rate. Each year, typically in the summer quarter (i.e., in ample time for students to adequately study for and take the exam by the deadline), the department will solicit student interest in purchasing these materials. The department will then order these materials in bulk, and students will reimburse the department upon picking up their materials from the department. Students are under no obligation to purchase these materials from Academic Review and are free to prepare for the EPPP in the manner they see best fit.

All Ph.D. students will complete the comprehensive examination by March 31st of their fourth year. For the purposes of the comprehensive examination, students are required to pass the EPPP with a
Students who do not earn a passing score of 400 or greater must retake the exam and earn a passing score by October 15th of the same year in order to apply for internship or advance to candidacy. If a student earns less than 400 on their exam, they may re-take the exam once. If they do not pass with a 400 or greater on the second attempt, it is grounds for dismissal from the program. Though a score of 400 or greater represents a passing score for the purposes of the comprehensive examination, students are strongly encouraged to prepare themselves such that they will obtain a passing score at the doctoral level (a standard score of 500 or greater), as this will allow students to meet licensure requirements for the vast majority, if not all, states in the U.S. In other words, obtaining a score of 500 or greater is highly desirable, as it will enable the student to avoid taking the examination following graduation, when the vast majority of students are receiving additional intensive training in a postdoc or working in a place of employment.

**Graduation Requirements**

**Master’s Degree.** The Master’s degree is awarded in route to the doctoral degree and is based on completion of required foundational coursework that is typically completed in the first two years of the doctoral program. The requirements for the Master’s Degree can be found in the MA Degree Compliance Report (see Appendix) and/or online through LLU onTrack. In accordance with SBH policy, students being awarded the MA degree do not participate in June Commencement ceremonies.

**Doctoral Degree.** Students may participate in June Commencement ceremonies provided they have completed all degree requirements, including successful completion of the final defense of the doctoral dissertation, by May 31st of the year in which they intend to graduate. There are two exceptions to this policy. Students may still participate in June Commencement ceremonies if they have remaining internship units that will be completed no later than summer quarter and/or if they have dissertation edits remaining following the successful completion of their final defense. While departmental support staff will facilitate the completion and submission of forms for graduation, it is the student’s responsibility to initiate and ensure that all degree requirements and associated forms are completed appropriately in preparation for graduation.

**ADDITIONAL POLICIES AND PROCEDURES**

**Standards of Conduct**

Each student enrolled in the Psychology Department of the SBH is expected to accept personal responsibility for appropriate and professional conduct. In general, the psychology graduate student is to be guided by the standards outlined in the current Loma Linda University Student Handbook and this Student Training and Conduct Policy Handbook. More specifically, the student is also expected to uphold the general principles and ethical standards conveyed in the current American Psychological Association Ethical Principles of Psychologists and Code of Conduct. The Department of Psychology also endorses and upholds the University policy regarding sexual harassment and encourages graduate students to become familiar with the policy and the grievance process. Please refer to the Loma Linda University Sexual Harassment Policy. The student is likewise expected to aspire to the highest possible standards of conduct and to hold as a primary goal the welfare and protection of the individuals and groups with whom the student works.
Block Tuition Policy
The Department of Psychology utilizes block tuition until the student begins internship. If the student wishes to be removed from block tuition prior to internship and pay per unit, the following criteria must be met:

1. The student must have passed their comprehensive exam.
2. The student must have successfully passed the final doctoral dissertation defense (remaining edits are acceptable).
3. The students must have completed 190 units.
4. The student must have successfully completed all required didactic coursework.

When all of these criteria are met, the student must contact the Senior Administrative Assistant to the Chair in the main office, who will submit this request to University Records. If the student must enroll in any units other than Internship units (i.e., Psyc 799A or Psyc 799B) while on internship, the student must pay the per unit tuition rate in addition to paying the flat rate for Internship units.

Change of Degree Program

Although it is expected that students have given careful consideration to the appropriate degree program for their experience and career objectives, a student may realize once accepted into and participating in the Ph.D. clinical program that the PsyD degree is a better fit for their career goals and objectives. In such a case, a student currently enrolled in the Ph.D. clinical psychology program may apply to the department’s Psy.D. clinical psychology program. The student’s application will follow the application process for new students to the Department of Psychology, independent of the fact that they were admitted to the Ph.D. program. Applications must be submitted by the regular Department deadline for applications (currently December 31st).

Transfer Credit

Graduate course work, which is comparable in nature, content, and level to that offered by Loma Linda University Department of Psychology, may be accepted for transfer credit applicable toward the doctoral degree. The original course work must have been completed no longer than seven (7) years prior to the date of transfer request, at Loma Linda University, another USA institution accredited by a regional or national association, or a foreign institution recognized by its government. Transfer of credit is limited to a maximum of 30 units of the total units required for completion of the doctoral degree.

The student must file a Petition for Academic Variance form (available online at http://www.llu.edu/ssweb/registration.html or from departmental support staff) with the Psychology Department Administrative Office, and provide a syllabus and a transcript reflecting the grade attained for the original course. No previous coursework may be accepted for transfer credit.
for internal practicum, external practicum, pre-internship, internship, or doctoral research units (697). Requests for transfer credit must be reviewed by the Academic Affairs Committee on a case-by-case basis. Additionally, students may only take clinical courses that involve direct client contact at other institutions or in workshops with prior approval of the program. In order to obtain LLU credit for these classes, the student must complete and submit a petition of Academic Variance for formal consideration by the Academic Affairs committee.

**Course Waiver**

A graduate student in the Department of Psychology may request the waiver of a requirement if prior course work fulfills the requirements but does not qualify for transfer credit (if, for instance, the student has already transferred the maximum number of credits allowed).

No previous course work may be accepted for transfer credit for internal practicum, external practicum, pre-internship, internship, or doctoral research units (697). Requests for a waiver must be reviewed by the Academic Affairs Committee on a case-by-case basis.

**Note:** Students granted waivers must complete the number of units waived by taking coursework at Loma Linda University other than the waived courses.

**Grade Policy**

“The spirit and demands of graduate study require full-time devotion to course work, research, reading, and reflection. But neither the passage of time nor preoccupation with study assures success. Evidence of high scholarship and original contribution to the field or professional competence forms the basis for determining the awarding of the degree and the awarding of grades.” (SST Bulletin, 1998, p. 30).

A GPA of B (3.0) is the minimum acceptable standard in the SBH. This is also the minimum standard in psychology courses offered by the Loma Linda University, Department of Psychology. A GPA less than 3.0 is below standard. Course grades of B- or below will not apply toward the degree. The department adheres to the following grading policy:

1. If a grade of B- or below is received during a quarter, the student must retake the course and achieve a grade of B or higher if the course is to apply to the degree. The course may be repeated once. Not attaining the appropriate grade(s) is grounds for dismissal from the program. The student will pay the tuition for the repeated psychology courses.

2. If a grade of B- is received in three courses, irrespective of the GPA, this may be grounds for dismissal from the program.

3. Items 1-2 above include grades of U/Unsatisfactory.

4. If a course is taken outside of the psychology department, then the required grade for passing at the doctoral level will be determined by the standards of the program in which the course was taken.
5. Students are responsible for monitoring their progress and for requesting assistance when additional instruction and/or tutoring are required.

**Student Evaluation and Remediation**

Every student enrolled in the Ph.D. clinical program is annually evaluated by the full faculty. Students are evaluated in the following domains: academic, clinical, research, and professionalism. Information is gathered from individuals knowledgeable about the student’s academic, clinical performance, and personal presentation of self, such as course instructors, clinic supervisor/director, practicum site supervisors, and research mentor(s). Items of special importance are: attitudes, timeliness in completion of tasks, meeting identified timelines for your program, and overall professionalism. Students are required to complete an annual progress report and provide the names and contact information of all clinical supervisors to inform this evaluation. Possible outcomes of the annual evaluation are: Advancement, Alert, Probation (clinical or academic), or Dismissal. The student will receive formal written feedback of their evaluation. If a student is placed on Alert, they will typically be referred to the Student Affairs Committee to develop a remediation plan. If there is a recommendation to place the student on Probation and/or Dismissal, it will be forwarded to the department chair who will then determine whether to formally forward the recommendation to the Dean of SBH. Policies governing Probation and Dismissal will be determined by the Dean’s office. Students are encouraged to discuss their evaluation with their advisor.

**Student Affairs Committee**

The role of the Student Affairs Committee (SAC) is to support students in the program if problems arise within academic, research, professionalism, clinical, or interpersonal domains. Students may be referred to and/or meet with SAC for a range of reasons. The process outlined below is followed if SAC determines that remedial and/or corrective actions are necessary. Please note that not all phases of disciplinary action outlined may be applicable in all cases.

**Phase I: Alert.** Students are provided with an official ALERT when a situation or problem exists that has the potential to jeopardize either the academic or professional development of the student and/or may impact the clients served by the student. When a situation or problem such as this is identified, the department Student Affairs Committee meets with the student to develop a Remediation Plan. The Department Chairperson is notified of the Committee's actions. The Remediation Plan becomes a part of the student's permanent file. A student who continues to have an unresolved problem(s) or who has demonstrated blatant disregard for the Remediation Plan by the date identified for completion shall be notified by the Student Affairs Committee that he/she has been placed on academic and/or professional probation vis a vis recommendation to the School of Behavioral Health.

**Structure and Procedures of the Remediation Plan.** In the event that a written Remediation Plan is developed to resolve the identified academic and/or professional performance issue(s), a copy of the Remediation Plan will be provided to the student within thirty business (30) days (excluding holidays and regular school breaks) of its development. The Remediation Plan shall specifically state the concern(s), the action(s) to be undertaken by the student, and the date by which the student must demonstrate completion of and/or compliance with the Remediation Plan. In the event that
the Remediation Plan is of a long-term nature, the student's progress is reviewed no less than one quarter following the date the Remediation Plan is considered to be in executory status, and until a statement of closure has been placed in the student's academic file. Closure of a Remediation Plan is processed by the Student Affairs Committee on or before the date specified in the Remediation Plan. The committee reviews the student's progress to determine whether or not the identified issue(s) has (have) been resolved. The committee's decision is then reported to the student with a copy forwarded to the Department Chairperson. A copy of the statement incorporating the Remediation Plan is placed in the student's academic file.

**Phase II: Probation.** Students who have not attended to the requirements of a Remediation Plan, or for whom a serious situation or problem is identified that has immediate ethical consequences that may affect the well-being of the student and/or clients, will be placed on academic and/or professional probation. In these cases, the Student Affairs Committee recommends to the Department Chairperson that the student be placed on academic and/or professional probation for one quarter. The Department Chairperson forwards the Committee's recommendation to the School of Behavioral Health for formal action. The department's Student Affairs Committee shall convene and develop a Corrective Action Plan within thirty business (30) days (excluding holidays and regular school breaks) of notifying the student of the recommendation for academic and/or professional probation.

The department's Student Affairs Committee may recommend to the School of Behavioral Health that the student's probationary status be continued for a second quarter if the student's progress toward amelioration of the identified concern(s) has not met the outcomes of the Corrective Action Plan and subsequently the identified professional performance standard that originally warranted placing the student on probation. A student placed on probation may be enrolled in both course and practicum experiences unless a reduced academic load is deemed a necessary part of the student's Corrective Action Plan. A student who cannot resolve or show measurable progress toward resolving a Corrective Action Plan may be recommended for suspension or dismissal depending on the severity of the circumstances.

**Structure and Procedures of the Corrective Action Plan.** In the event that a written Corrective Action Plan is developed to resolve the identified academic and/or professional performance issue(s), a copy of the Corrective Action Plan will be provided to the student within thirty business (30) days (excluding holidays and regular school breaks) of its development. The plan shall specifically state the concern(s), the action(s) to be undertaken by the student, and the date by which the student must demonstrate completion of and/or compliance with the plan. In the event that the plan is of a long-term nature, the student's progress is reviewed no less than one quarter following the date the Corrective Action Plan is considered to be in executory status, until a statement of closure has been placed in the student's academic file. Closure of a Corrective Action Plan is processed by the department's Student Affairs Committee on or before the date specified in the Corrective Action Plan. The committee reviews the student's progress to determine whether or not the identified issue(s) has (have) been resolved. The committee's decision is then reported to the student, with a copy forwarded to the Department Chairperson. A copy of the statement incorporating the Corrective Action Plan is placed in the student's academic file and provided to the School of Behavioral Health. Notwithstanding, a student will not be approved for graduation if he/she has unresolved concern(s) on file, whether or not he/she has been placed on academic
and/or professional probation.

**Phase III: Dismissal.** A student who violates the legal and/or ethical standards of professional practice, cannot meet the objectives and outcomes of a Corrective Action Plan, evidences severity in the identified problem(s), or develops additional problems during a period of corrective action of a similar scope as those previously identified, will be dismissed from the School of Behavioral Health. When any or all of the above are evidenced, the department’s Student Affairs Committee recommends to the Department Chairperson that the student be immediately dismissed from the program. The Department Chairperson meets with the Student Affairs Committee to review their decision and then subsequently forwards the recommendation to the School of Behavioral Health for formal action (see Loma Linda University Student Handbook Grievance Procedure).

Students dismissed from the School of Behavioral Health may apply for readmission after three years. Re-admission will be considered pending evidence that issues prompting dismissal have been corrected.

**Plagiarism**

Plagiarism has occurred when a student (1) steals or attempts to pass off as his/her own, the ideas or the words of another person, (2) uses a creative production without identifying and crediting the source, or (3) fails to give credit for a direct quotation, for paraphrasing or summarizing a work (in whole, or in part, in her/his own words), or for information that is not common knowledge. “Plagiarism happens when you use the exact language of someone else without placing the words in quotation marks and citing the original author. It also occurs when someone else’s arrangement of material or pattern of thought is offered as your own, even if it is expressed in your own words, without citation. It occurs when you transfer a sequence of ideas from an original source to a new paper without being digested, integrated, and reordered in your mind.”¹ All psychologists will use sources and ideas from others in writing papers – it is expected that a writer will demonstrate how her/his ideas integrate with, build on, or contrast with those of others in the field. However, whenever a writer uses the ideas of another writer, even if he or she is paraphrasing the source or merely following the same outline of ideas and thoughts, the writer has a responsibility to give credit to the source of the ideas, or structural outline.

Plagiarism is unethical and illegal. Under no circumstances will plagiarism be tolerated at any stage of development of any research proposal, project, paper, take-home examination or other essay required for any course in this Department. To include paraphrases or summaries of other’s work in any paper, proposal, project, or essay, APA style conventions must be followed, acknowledging the relevant source(s) by citing appropriate reference(s).¹

¹Much of this material on plagiarism has been copied in part and adapted from the statement used in the Department of Psychology at La Sierra University which was prepared by Paul Mallery, Ph.D. Used with permission.

**Grievance Policy**

Consistent with APA ethical guidelines, students are encouraged to resolve grievances by first directly addressing the problem with the individuals involved. Students are also encouraged to seek consultation with their DCT, other faculty advisors, and/or supervisors to help them address the
problem professionally and effectively. If the situation cannot be satisfactorily resolved in this manner, students are then encouraged to follow the formal grievance procedures outlined below.

**Grievance Procedures.** A student who feels that he/she has been unfairly treated or disciplined may enter a grievance process as outlined below:

1. The student shall first discuss the grievance with the instructor/faculty member involved. Per the overarching grievance policy, students are encouraged to seek consultation with their DCT and/or other faculty advisors to help them address the issue.

2. If the student is dissatisfied with the results of step one, or it is inappropriate to address the instructor/faculty member directly, the student may submit a grievance, in writing, to the Student Affairs Committee. The Student Affairs Committee will gather information and make a recommendation to remediate the issue. The student will be notified of the committee’s decision/recommendation within 14 days of the meeting.

3. If the student is dissatisfied with the results of the Student Affairs Committee, he/she may submit the grievance, in writing, to the Department Chair. The Department Chair may affirm, modify or overturn the decision of the Student Affairs Committee. The Department Chair will notify the student, in writing, of his/her decision within 14 days of its referral.

4. If the student is dissatisfied with the decision of the Department Chair, the student may appeal to the Department Chair for reconsideration. The Department Chair shall examine the request and inform the student in writing of the decision.

5. If the student is dissatisfied, he/she may appeal to the Dean of the School of Behavioral Health.

All written communication associated with the grievance process will be placed in the student’s permanent file.

**Leaves of Absence**

Students who have personal difficulties (e.g., serious illness) that prevent them from participating in the program for a given period of time may request a leave of absence from the program. In most cases, a leave of absence is granted for no more than one year. To obtain a leave of absence, the student must go online to myllu.edu. Under student forms is a link called, “Leave of Absence.” After submitting the form, it will automatically route for approvals.

**Faculty and Staff**

In accordance with the *American Psychological Association Ethical Principles of Psychologists and Code of Conduct*, all graduate students in the Department of Psychology will demonstrate respect for and appropriate professional conduct when interacting with Departmental faculty and staff. While faculty and staff intend to be responsive to student emergencies, general interactions should be confined normal business hours.

**Communications**
The department uses several modes of communication. However, the primary means is e-mail, and the only official form of email communication, in accordance with university and SBH policy, is through LLU e-mail. We are not authorized to send e-mails to your personal accounts, and your personal e-mail is not authorized for University use. Therefore, please keep your LLU email empty so you can receive e-mails. If something should happen to your account, please call the LLU Help Desk at (909) 558-8053 or on campus, Ext 48611 or lluhelpdesk@llu.edu for assistance. The help desk will provide the corrections for the problem.

**Student Schedule Priorities**

Establishing schedule priorities is an important aspect of planning for success. The most essential part of the academic program is course work. With the exception of Chapel, classes are the #1 priority. Everything else revolves around classes. Therefore, do not schedule other activities during scheduled class times. Though there may be exceptions that should be discussed with your chair, the following is a general guiding heuristic scheduling importance (in descending order):

1. **Classes** required for degree completion
2. **Clinical placement** obligations (it is required that you not schedule clinical training during class times)
3. **Staff meetings** for internal clinics (schedule around classes)
4. **Course labs** are to be scheduled outside of class time
5. **Research meetings/Group supervision** in the internal clinic (schedule outside of class times)
6. **Clients** are not to be scheduled during class times
7. **Individual research supervision/Individual clinical supervision** in the internal clinic (schedule outside of class times)
8. **Student’s work schedule must not be during class times**

In summary, no activities are to be planned during scheduled classes. When schedule conflicts arise, discuss the matter with the instructors/supervisors involved. Because course schedules vary, outside of class meetings may have to change from quarter to quarter. However, every attempt is made to keep this at a minimum.

**Length/Residency Requirement**

In accordance with APA’s Standards of Accreditation (SoA), the program requires the following with regard to length and residency:

1. The program requires a minimum of 3 full-time academic years plus internship prior to receiving the doctoral degree.
2. At least 2 of the 3 academic training years must be at the program from which the doctoral degree is granted.
3. At least 1 year must be in full-time residence at the program.

It is important to note that adherence to the program requirements contained in this handbook will result in students far surpassing APA’s minimum length and residency requirements.
Revisions/Additions to the Student Training & Conduct Policy Handbook

As the Psychology Department evolves over time, the program faculty reserves the right to revise this handbook.

**Units**
TOTAL UNITS FOR DEGREE: 204

**ACADEMIC ADVISOR:**

NOTE: Though it is not required, students may elect to complete a Professional Concentration by taking 12 elective units (of the 18 required) in a focal area. Professional Concentrations must be approved by the Department Academic Affairs Committee. A maximum of 6 units of PSYC 795 may be counted toward a Professional Concentration.

NOTE: If you plan to be licensed in another state, check with that Psychology Board to determine what electives are required, i.e., 676-686.

- Spring
- Begin app & study for Comp/EPPP by Dec. 1
- Take Comp/EPPP by March 31st (last possible)
- Begin internship class and applications

Year 5
- Summer
- Fall
- Winter
- Spring
- Work on internship applications
- Defend dissertation Oct. 15th (last possible date)
- Submit internship applications (Nov. 1st)
- Internship interviews
- Submit article for publication by June 30th (last possible)
- Leave for internship

Year 6
- Summer
- Fall
- Winter
- Spring
- GRADUATION

Post-Doc
- Summer
- Fall
- Winter
- Spring
- Apply for licensure and take CPLE
Internship Eligibility Requirements Checklist*
(Complete the form below and submit as part of your internship packet.)

_____ 1. 700 Face-to-Face hours, a minimum of 150 of which must be assessment hours.
   • Current number of face-to-face hours: ________________
   • Estimated number of face-to-face hours as of Nov 1, 2017: ________________
   • Current number of face-to-face assessment hours: ________________
   • Estimated number of face-to-face assessment hours as of Nov 1, 2017: ______

_____ 2. A minimum of 5 integrated assessment reports.
   • Current number of integrated assessment reports: ________________
   • Estimated number of assessment reports as of Nov 1, 2017: ________________

_____ 3. Doctoral projects and dissertations proposal/defense dates must be met.
   • For PsyD students who started the program in 2014 and earlier: Doc project must be proposed by October 15th.
   • For PsyD students who started the program in 2015 and later: Doc project must be defended by October 15th.
   • For PhD students on the original program timeline who are doing both a thesis and dissertation, your dissertation must be proposed by October 15th.
   • For PhD students who have switched to the new dissertation-only program timeline, your dissertation must be defended by October 15th.
   • Degree: ________________ Year entered program: ________________
   • Proposal Date: ________________ Defense Date: ________________

_____ 4. Must apply to at least 20 sites, 7 of which must be outside of California.** All sites that you apply to during Phase 1 of the Match must be APA-accredited.

_____ 5. Must have 1 poster presentation, or 1 conference talk, or 1 publication.
   • Please provide reference for one presentation/talk/publication below:

_____ 6. Must pass EPPP with a standard score of 400 or higher.

_____ 7. Must be member of APA or another appropriate organization.
   • PsyD students: Must be members of at least APA
   • List the organization(s) in which you have membership in the space below:

_____ 8. Must attend internship preparation seminar (attendance will be verified via sign in sheets).

_____ 9. Application packets for faculty review (see syllabus for specific components)

*Please note that these are minimum departmental requirements for eligibility to apply to internship; requirements may be greater for some clinical specialty areas. Please research the typical requirements in your specialty area

**Not Applicable to students with Navy Scholarships.

Rev. 08/2018
Internship Registration Procedures

1. Block Tuition will be discontinued at the close of Spring Quarter, for students who meet departmental criteria to be removed from block tuition. Names of students will be submitted to Student Finance Office and to the Records Office.

2. Finance charges during internship: (a) Per unit tuition rate; (b) Per unit tuition rate for research units.

3. A total of 40 units must show on your transcript by the time you complete internship.

4. During Summer registration PSYC 799 A (5 units) or PSYC 799B (10 units) apply. This is based on when internship begins.

   Rule:
   (A) If your internship begins before June 15th, students are to register for PSYC 799 B (10 units).
   (B) If your internship begins between June 15th and September 15th, students are to register for PSYC 799 A for 5 units during that first summer of internship; then 799 A for 5 units during that last summer of internship.

The tuition charge for 5 units is .5 units and for 10 units is 1 unit.

Before you press the submit button for on-line registration, make certain that you have registered for the correct internship units. If you do not, you will have created a situation for yourself and if not corrected, you will be short internship hours which will prohibit you from graduating (and beginning your post-doc/job) and cost you substantial finances. YOUR TRANSCRIPT MUST REFLECT EITHER (Summer, 5 units; Fall, 10 units; Winter 10 units, Spring, 10 units, and Summer, 5 units = 40 total units). OR (Summer 10 units; Fall, 10 units; Winter, 10 units; Spring, 10 units = 40 total units).

Should you have challenges with registration, please contact Lesley Taylor @ (909) 558-8706 or litaylor@llu.edu.

5. The vast majority of internship sites offer health insurance to interns or pay a stipend specifically to cover insurance purchased on your own. In an effort to help students, the Department of Psychology has made arrangements with the Registrar to not charge the enrollment fee when you register for either PSYC 799A or 799B. The enrollment fee covers, among other things, the LLU student health plan. If you are in need of the LLU student health plan, you will need to contact Risk Management about “buying in”. The fee for just the student health plan is around $525 per quarter, contact Risk Management for details.

6. It is the student’s responsibility to keep up with registration dates while you are away!! DON’T WAIT UNTIL THE LAST MINUTE.

7. Should you encounter challenges with your training director or supervisors, please contact your DCT and Lesley Taylor immediately.

8. Make certain that the Department of Psychology has your most current phone numbers in case of the need for instant contact. Use your LLU e-mail for regular communications with the department. Be sure and keep your e-mail box empty so it can receive communications sent to you.

Revised 8-16-18    LT
## Advancement to Candidacy and Research Progression

<table>
<thead>
<tr>
<th><strong>Advancement to Candidacy</strong></th>
<th><strong>Dissertation (Ph.D.)</strong></th>
</tr>
</thead>
</table>
| **Requires:** | (1) Successful completion of the comprehensive examination  
(2) Completion of core curriculum  
(3) Successful defense of the dissertation proposal*  
(4) Completion of any other SBH or university requirements |

* Student needs to meet with the Admissions and Records Coordinator prior to and after defense of dissertation proposal for required paperwork. |

| **Dissertation Final Defense** | **A public final defense of the dissertation before the supervisory committee (the membership of which is governed by the terms described in the relevant section of this handbook) is required. The student is responsible for scheduling the defense. The student must contact the Admissions and Records Coordinator to reserve a room, publicize the defense and complete the necessary paperwork. It is required that students send their committee the finalized document a minimum of 2 weeks prior to their formal defense date.** |

| **Finalizing/Binding the Dissertation** | **After a successful defense, the student must address all edits recommended by the committee. The chair must approve all edits and notify the Admissions and Records Coordinator. Once edits are approved, students will work with a representative from FGS to format the document appropriately for binding. In order to graduate, the document must be submitted for binding.** |

TOTAL UNITS FOR DEGREE: 83

ACADEMIC ADVISOR: ____________________________
**Student Funding Sources**

The department recognizes that, for many students, funding their doctoral program in clinical psychology is an important issue that requires thoughtful consideration. This document is aimed at helping you understand the funding sources available to our doctoral students. Most students in the department utilize federal (e.g., Stafford) and/or private loans to fund the majority of costs associated with graduate school. However, there are other potential sources of funding that, though limited and competitive in nature, do not require repayment and can assist students in offsetting some of the costs of the program. These potential sources of funding include:

**-Teaching Assistantships:** Many instructors in the department utilize one or more teaching assistants (TA’s) in teaching their graduate courses. Courses that routinely involve TA’s include, but are not limited to, Psychometrics, all Stats courses (I, II, and III), all Evidence-Based Psychological Practice courses (I-IV), and all Psychological Assessment courses (I-III). Students who have already completed a course and possess the skills necessary to serve as a TA are able to express an interest in serving as a TA in a subsequent year and are considered by the instructor of the course. Students are typically paid hourly (5-10 hours/week, depending on the class) through Federal Work Study (FWS) funds, which results in students needing to take fewer federal/private loans.

**-Research Assistantships:** Most faculty in the department utilize one or more research assistants (RA’s) to help manage the needs of their research labs. Through these positions, students can often be involved in the conceptualization, background/literature review, IRB process, data collection/analysis, results/discussion writing, and professional presentations/publications related to the work being conducted in the lab. Some of these positions are funded through FWS (through which students are paid an hourly rate, which in turn reduces the amount of loans students must take) or other mechanisms (e.g., grant funding secured by a faculty member). Students who possess an interest, commitment, and the necessary skill set to contribute as an RA in a particular lab are typically considered by faculty for these positions.

**-Teaching positions:** Though there is no undergraduate psychology major at LLU, there are a few programs on campus that require prospective students to take specific undergraduate psychology courses as pre-requisites for admission to their programs. Our doctoral students serve as the instructors for these undergraduate psychology courses, which currently include Introduction to Psychology, Life-span Development, and The Exceptional Individual. Students are selected by faculty to teach these courses based on their performance and progress in the program, as well as the relevance of teaching to their professional goals. Students who teach these courses are paid directly through a teaching contract.

Furthermore, our doctoral students have, on occasion, been able to teach undergraduate or masters level courses at surrounding universities, including Cal State University – San Bernardino (CSUSB), University of Redlands, and La Sierra University. Students who secure these positions are also paid directly through a teaching contract.

**-Tuition remission awards:** The department provides a limited number (typically 4-6 out of a combined Ph.D./Psy.D. entering cohort of 25) of partial tuition remission awards for first year
students that are typically $5,000-$10,000 each and are awarded through two mechanisms.

A number of these awards are merit-based, and are given based on faculty appraisal of the strength of a student’s academic background, performance, and potential. Currently, the minimum criteria for being considered for a partial tuition remission award is that the sum of the percentile ranks of the student’s GRE Verbal and Quantitative subtests must be equal to 150 or higher, and the student must obtain a 4.5 or higher on the Analytical Writing subtest. For students who meet these minimum criteria, faculty then consider other components of their application in reaching a decision regarding recipients of these awards. In addition to these awards, the department also provides a number of partial tuition remission awards to diverse individuals in support of the department’s continual efforts to recruit and retain diverse students.

Full tuition remission awards may be provided to students in cases in which a faculty member has written such awards into grant budgets secured by the faculty.

-Funding for clinical service delivery: Though, consistent with the larger practicum landscape in Southern California, the vast majority of practicum sites in which students are placed are not paid experiences, there are some notable exceptions.

Consistent with our department, school, and institutional identity, the department has created a Primary Care Psychology concentration. One practicum site that provides training in primary care psychology is the LLU Department of Family Medicine which, in partnership with the Department of Psychology, has been awarded a HRSA Primary Care Training and Enhancement (PCTE) grant that provides funding for a period of five years. As part of this grant, all students who are currently selected to complete a two-year practicum training in Family Medicine are paid a stipend of $10,000 and receive a $5,000 tuition remission for each of the two years they are placed in LLU Family Medicine. This practicum accepts 3 new students each year. Interested students must have professional goals relevant to Health/Primary Care Psychology and must complete the department’s established Primary Care Psychology concentration with at least 12 of their required elective units if they are selected for this site. Students apply to and are selected during the annual practicum application cycle established by the department. Currently, there are at least two other practicum sites which have paid students hourly for their work.

-Clinic Associate and other department positions: There are a limited number of FWS funded positions available to advanced students who are selected to work at the LLU Behavioral Health Institute (BHI), which is a large, integrated behavioral health treatment facility that houses the department’s training clinic (along with training clinics operated by Social Work, Counseling and Family Sciences, and Psychiatry). Students selected to work as Clinic Associates at the BHI typically perform clinic administrative and research tasks at the BHI related to services provided to the community. Given that these positions are funded by FWS funds, students are paid an hourly rate, which in turn reduces the amount of loans students must take. There are also, occasionally, paid positions in the department that are filled on a temporary, as-needed basis.

-Funding for travel: Students are eligible to receive up to $400 annually for approved expenses (e.g., hotel, conference registration, transportation) related to travel to professional conferences (e.g., APA, WPA, etc.) in which the student is a formal contributor to a professional poster/paper
presentation.

Though the department aspires to provide funding to as many students as possible, the department is currently unable to provide funding to the majority of students and current funding is limited to the aforementioned mechanisms. Therefore, as previously mentioned, students typically fund the majority of costs through Federal and/or private loans. To our knowledge, no student has ever been unable to complete the program due to the inability to secure financial support from a combination of loans, the other sources of funding described in this document, and/or outside support.
I, ______________________________(print name), acknowledge that I have received, and agree to read and abide by, the terms set forth in this Handbook, as well as all other program, department, school, and university policies.
